ABSTRACT

The objective of this research article is to examine the determinants of stakeholders' protection in Indian life insurance companies. Stakeholders' protection is measured in terms of the ratio of shareholders' funds to policyholders' funds. Data for the study is collected and developed for the post-New Insurance Business Development Act (IRDA Act) period (2000-2010). Multiple regression model is used to examine the determinants of stakeholders' protection in Indian life insurance companies. The results of the study indicate that the ratio of shareholders' funds to policyholders' funds is significantly and positively related to equity investment in shareholders' account, to the ratio of investment in government securities to total investments in shareholders' account and to the ratio of investment in approved investments to total investments in shareholders' account. The results of the study also indicate that the ratio of shareholders' funds to policyholders' funds is significantly and negatively related to the ratio of investment in government securities to total investments in policyholders' account and to the ratio of investment in approved investments to total investments in policyholders' account. The results of the study are important and significant for policymakers, regulators and practitioners in the insurance industry.

INTRODUCTION

Insurance is a contract between two parties in which one party (insurer) undertakes to provide the insurance (indemnity), underwriting of products for protection and risk management to the other party (insured) in return for the payment of premium. Insurance companies are financial intermediaries that provide financial protection against the occurrence of uncertain events in the form of claims payments to insured or beneficiaries. Insurance companies are also financial institutions that mobilize savings from the public and invest in various financial assets. Insurance companies are also institutional investors in the capital market. Insurance companies are also financial institutions that provide employment to a large number of people in the economy. Insurance companies are also financial institutions that provide tax benefits to the policyholders and beneficiaries of the insurance policies. Insurance companies are also financial institutions that provide social security benefits to the policyholders and beneficiaries of the insurance policies. Insurance companies are also financial institutions that provide pension benefits to the policyholders and beneficiaries of the insurance policies. Insurance companies are also financial institutions that provide health benefits to the policyholders and beneficiaries of the insurance policies. Insurance companies are also financial institutions that provide other benefits to the policyholders and beneficiaries of the insurance policies.

REGULATORY FRAMEWORK: PROTECTING CONSUMERS' INTEREST AND SAFEGUARDING STAKEHOLDERS

Insurance is a complicated business in which promises are made and fulfilled over a long period of time. Insurance is a business in which the insurer collects premium in advance and pays claims in future. Insurance is a business in which the insurer collects premium in advance and pays claims in future.
