ABSTRACT

Dividend announcement is considered as a signal to convey information to the market. Many researchers have found relevance of signalling power of dividend announcement in developed countries. This study is an attempt to find out whether dividend announcements are relevant in Dhaka Stock Exchange (DSE) in Bangladesh. The study is also an attempt to find out the influence of certain factors that are considered to be important in the context of dividend announcement. Such factors are dividend announcement date, dividend announcement amount, dividend announcement year, dividend announcement sector, dividend announcement type and dividend announcement frequency. The study has found that dividend announcement date, dividend announcement amount, dividend announcement year, dividend announcement sector, dividend announcement type and dividend announcement frequency have significant influence on the dividend announcement in Bangladesh.

Keywords: Dividends, Earning, Industry Categories, Payout Timings, Stations.

INTRODUCTION

Dividend Announcement Policy is considered as a signal to convey information to the market. Many researchers have found relevance of signalling power of dividends to market. Still there are arguments among researchers whether dividend announcements are relevant in the market. Miller and Modigliani (M-M, 1958) developed a argument model for irrelevance of dividends to investors usually as a distribution of profits. Where a corporation earns a profit in surplus, it can pay out the profit as dividends to its shareholders or can retain it to re-invest in its shareholders. It proposed any surplus in terms of re-investment, the value of the corporation's shares would increase in the market and thereby the investor would derive an income from growth in share's capital value, which could be realized by selling them. In effect, an investor can "manufacture" his own dividends. Walter (1963) argued that dividend policy is relevant to the value of a firm. He argued that dividends are relevant because of the assumption that investments are financed exclusively by retained earnings and that the rate of return is constant regardless of the amount invested. Gordon (1963) argued that dividends are relevant because investors are risk averse and they put a premium on a certain return and discount uncertain returns. Therefore, investors would prefer dividends to capital gains because dividends are certain than capital gains which are uncertain. Lintner (1962) argued that dividends are relevant because corporate managers are reluctant to change the dividend rate if they cannot maintain it in the future. Dividend announcement is considered as a signal to convey information to the market. Many researchers have found relevance of signalling power of dividend announcement in developed countries. This study is an attempt to find out whether dividend announcements are relevant in Dhaka Stock Exchange (DSE) in Bangladesh. The study is also an attempt to find out the influence of certain factors that are considered to be important in the context of dividend announcement. Such factors are dividend announcement date, dividend announcement amount, dividend announcement year, dividend announcement sector, dividend announcement type and dividend announcement frequency. The study has found that dividend announcement date, dividend announcement amount, dividend announcement year, dividend announcement sector, dividend announcement type and dividend announcement frequency have significant influence on the dividend announcement in Bangladesh.

STATEMENT OF THE PROBLEM

Dividend Announcement Policy is formulated by the board of directors of a company in order to make decision how much earnings would be distributed to the shareholders and how much would be retained in the business to finance future investments. Dividend is the return that a shareholder receives from corporation's profits. Dividend is usually declared annually by a company's corporate board of directors, it may subsequently be approved by the company's shareholders. Dividends may be issued as cash payments, as shares of stock, or other forms. Dividend announcement is considered as a signal to convey information to the market. Many researchers have found relevance of signalling power of dividend announcement in developed countries. This study is an attempt to find out whether dividend announcements are relevant in Dhaka Stock Exchange (DSE) in Bangladesh. The study is also an attempt to find out the influence of certain factors that are considered to be important in the context of dividend announcement. Such factors are dividend announcement date, dividend announcement amount, dividend announcement year, dividend announcement sector, dividend announcement type and dividend announcement frequency. The study has found that dividend announcement date, dividend announcement amount, dividend announcement year, dividend announcement sector, dividend announcement type and dividend announcement frequency have significant influence on the dividend announcement in Bangladesh.

PURPOSE OF THE STUDY

The purpose of this study is to know about the company's perceived earning, industry category, business payout timings, dividend announcement year, dividend announcement sector, dividend announcement type and dividend announcement frequency. Many researchers have found relevance of signalling power of dividend announcement in developed countries.

- To find out if dividend announcement will be reduced for high tax rate.
- To find the high tax rate affects the shareholders wealth or not.
- To find out the stock company discourages to pay dividend.
- To find out the company pays semi-annual or yearly basis to pay good news for the shareholders.

HYPOTHESIS

- **H0:** Dividend paying tolerance is associated with the company's industry category.
- **H1:** Payout timing announcement will be tolerance to investors' wealth.
- **H0:** Higher tax rate impact on dividend announcement policy.
- **H1:** Dividend announcement frequency is associated with business and its sectors tolerance to investors.

SAMPLE AND

The sample unit of research design is mostly dependent on different companies's dividend announcement in Bangladesh. According to the dividend announcement data the questionnaires prepared by the questionnaires prepared by the questionnaires prepared by the questionnaires which was collected from the questionnaires prepared by the questionnaires prepared by the questionnaires prepared by
